Re: **Quarterly Monitoring Progress Report – 1st Quarter 2010**
Michigan Plaza
3801-3823 West Michigan Street
Indianapolis, Indiana 46222
IDEM Incident # 0000198
IDEM VRP # 6061202
MUNDELL Project No. M01046

Dear Ms. Brittain:

This *Quarterly Monitoring Progress Report* is being submitted to the Indiana Department of Environmental Management (IDEM) by MUNDELL & ASSOCIATES, INC. (MUNDELL), on behalf of AIMCO, to summarize further site characterization, remediation activities and quarterly monitoring performed from January 1 through March 31, 2010. The following sections provide detailed discussions of the results of this work. All activities were completed on schedule.

United States Environmental Protection Agency (U.S. EPA)/IDEM MEETING – MARCH 6th, 2010

Mr. John Mundell and Ms. Sarah Webb met with Ms. Erin Brittain, Ms. Sarah Finley-Johansen and Ms. Kristie McIntyre of IDEM; Mr. Brian Schlieger and Ms. Shelly Lam of the U.S. EPA; and Mr. Jay Rush of Weston Solutions, Inc., on March 6th, 2010 regarding the vinyl chloride impacts in residential wells west of the Plaza and south of Allison Transmission Plant 12. The following topics were discussed:

Topics Discussed

- 1) Possible location of additional MUNDELL monitoring wells east of Holt Road to further understand groundwater flow direction south of the Plaza along Little Eagle Creek.
- 2) Proposed downgradient monitoring well locations for the Allison Transmission Plant 12 for evaluation of potential off-site vinyl chloride migration.

As of April 8, 2010 Allison was proceeding with the installation of four soil borings and two piezometers southeast of Allison Plant 12. Allison was not present at the IDEM/U.S. EPA meeting.

MUNDELL's assessment of the local groundwater flow conditions near Allison Plant 12 led to a different conclusion regarding how to proceed with the additional groundwater investigation. During the IDEM/U.S. EPA meeting, MUNDELL commented that completion of two resistivity lines southeast of Allison Plant 12 would allow for proper well screen placement and sampling intervals within the various saturated units. The geophysical survey would be followed with installation of three piezometers (or nested wells) along the Allison Plant 12 southeastern property line.

At this time it appears Allison has gone forth with its original work plan installing four soil borings and two piezometers southeast of Plant 12. Analytical results from this investigation have yet to be provided to MUNDELL.

- 3) Creation of a unified area map and completion of a unified groundwater elevation gauging event, at the request of the U.S. EPA.

GROUNDWATER MONITORING NETWORK SAMPLING

On February 3rd to 4th, 2009, quarterly groundwater sampling of the existing twenty-four (24) monitoring wells established with IDEM, and the two (2) additional monitoring wells on the Floral Park Cemetery property was performed. The following constitute this quarterly groundwater monitoring network:

- 1) *Twenty-four (24) MUNDELL monitoring wells:* MMW-1S, MMW-8S, MMW-9S, MMW-10S, MMW-11S, MMW-11D, MMW-12S, MMW-13D, MMW-14D, MMW-P-01, MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04, MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-09S, MMW-P-09D, MMW-P-10S, MMW-P-10D and MMW-C-01 and MMW-C-02 (MUNDELL wells on Floral Park Property).
- 2) *One (1) Keramida monitoring well:* MW-168D. MW-168S was not sampled due to an insufficient volume of water in the well.

MUNDELL also measured static groundwater elevations via an electric oil/water interface probe from the following additional wells this quarter:

- 1) MUNDELL monitoring wells MMW-3S, MMW-4D, MMW-5D, MMW-6D and MMW-7S.
- 2) *Nine (9) Keramida monitoring wells:* MW-167S, MW-167D, MW-168S, MW-169S, MW-169D, MW-170S, MW-170D, MW-171S and MW-171D.

The purpose of this ‘all monitoring wells gauging event’ in February 2010 was to more accurately determine the groundwater flow direction and gradient over this wider area.

During this investigation, monitoring wells MMW-10S, MMW-10D, MMW-P-07 and MW-168D were found to contain black flakes at the top of the water table. Black precipitate in groundwater can indicate the presence of iron reducing bacteria. Limited ferrous iron analyses following the initial CAP 18TM injection in August 2007 indicate slight elevations of ferrous iron concentrations within these monitoring wells, suggesting the black precipitate observed is potentially the byproduct of reductive biotransformation within the aquifer.

All monitoring well sampling, survey and construction data are provided in **Tables 1, 2 and 2a**, respectively, and the potentiometric map is illustrated in **Figure 1**.

The wells were sampled utilizing the dedicated bladder pumps for uniform low-flow purging and sample collection. The Troll 9500 multi-parameter meter (used inline with the dedicated bladder pumps) logs geochemical parameters (e.g. temperature, pH, dissolved oxygen, conductivity and oxidation reduction potential), which helps remove a minimal but sufficient amount of water (indicated by stabilization of geochemical parameters) to sample the well. The Troll helps assess the geochemical parameters as evidence of conditions naturally conducive to natural attenuation existing in the aquifer. All excess purge water was transported to 55-gallon drums located at the Site for proper disposal. In accordance with IDEM guidelines, the contents in each drum were then identified with a label describing them as non-hazardous materials.

As agreed in the October 29th, 2008 meeting with IDEM and detailed in the *RWP Addendum* November 2008, groundwater samples were submitted to Pace Analytical Laboratories (Pace) in Indianapolis, Indiana for the shorter list of VOC analysis via U.S. EPA SW-846 Method 8260, along with the appropriate duplicate (DUP), matrix spike (MS) and matrix spike duplicate (MSD). Groundwater samples were transferred into three 40-milliliter glass sample vials containing the preservative hydrochloric acid (HCl). Groundwater sample vials were sealed in plastic bags and placed in a cooler containing ice and delivered to Pace using appropriate chain-of-custody protocol for laboratory tests. Pace laboratory certificates of analysis for the groundwater samples analyzed are presented in **Appendix A**.

Baseline groundwater geochemical parameters (pH, dissolved oxygen, oxidation-reduction potential, conductivity and temperature) were measured with a low-flow cell and multi-parameter water quality probe in this post-injection period to evaluate whether aquifer conditions continue to be favorable for natural attenuation of the indicator compounds at the Site.

Additional aquifer chemical parameter testing has been performed in the past and will be scheduled based on the observed response and remedial status in each plume area going forward. Additional aquifer parameters including methane, ethene and ethane are periodically analyzed to evaluate the indicator compound breakdown and redox-sensitivity. In addition, volatile fatty acids (VFA) will also be tested periodically to evaluate the injection substrate CAP 18TM distribution and lifetime duration of the product. These samples will be collected in select monitoring wells representative of each plume to monitor the presence of residual CAP 18TM in the aquifer and to provide additional monitoring of aquifer conditions. Future monitoring of these constituents will be performed as needed to evaluate the natural attenuation process.

INDOOR AIR MONITORING

On March 4th, indoor air samples (taken via summa canisters) were collected at four tenant units at Michigan Plaza (Village Pantry (3801), Vacant Handicapped space (3815), Mexican Grocery store (3819) and the Laundromat (3823)) with the air mitigation systems on, and at four apartments (Basement Apt. 101 (Building No. 1), Basement Apt. 602 (Building No. 6), Basement Apt. 1001 (Building No. 10), and Apt No. 108 (Second Floor, Building No. 1)).

Indoor air samples (via summa canisters) were also collected at two more tenant units at Michigan Plaza (Alcoholics Anonymous (3817), and the vacant library space (3805) on March 4th, 2010, since the 3817 and 3805 spaces are now periodically occupied.

Tables 3a, 3b, 3c and 3d present the air sampling results for Michigan Plaza, Michigan Apartments, soil gas monitoring wells and the health based limits in air respectively. **Figure 2** demonstrates the recent and historical air analytical results.

GROUNDWATER ANALYTICAL RESULTS

Groundwater analytical testing results for this quarter are summarized in **Table 4** and presented on **Figure 3**. Two (2) out of the twenty-five (25) monitoring wells sampled this quarter (MMW-1S and MMW-P-01) showed PCE concentrations exceeding the IDEM RISC Industrial Default Closure Level (IDEM RISC IDCL). Three (3) monitoring wells (MMW-8S, MMW-10S and MMW-P-02) demonstrated PCE concentrations exceeding the IDEM RISC Residential Default Closure Level (IDEM RISC RDCL) but below the IDCL. The historical groundwater results are included in **Table 5**. The historical indicator compounds trends in groundwater are presented in **Figure 4**.

Two (2) of the monitoring wells (MMW-1S and MMW-P-01) showed TCE concentrations exceeding the IDEM RISC IDCL, with one (1) monitoring well (MMW-10S) exhibiting a level exceeding the RDCL, but below the IDCL.

Three (3) monitoring wells (MMW-9S, MMW-P-01 and MMW-P-08) showed cis-1,2-DCE concentrations exceeding the IDEM RISC IDCL. Eleven (11) monitoring wells (MMW-10S, MMW-11D, MMW-13D, MMW-14D, MMW-P-02, MMW-P-03S, MMW-P-04, MMW-P-06,

MMW-P-07, MMW-P-10D and MMW-C-01) exhibited cis-1,2-DCE concentrations exceeding the RDCL, but below the IDCL.

Twenty (20) monitoring wells (MMW-1S, MMW-8S, MMW-9S, MMW-10S, MMW-11D, MMW-13D, MMW14D, MMW-P-01, MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-09D, MMW-P-10S, MMW-P-10D, MW-168D and MMW-C-01) showed vinyl chloride concentrations exceeding the IDEM RISC IDCL. One (1) monitoring well (MMW-12S) exhibited a vinyl chloride concentration slightly exceeding the RDCL, but below the IDCL.

The deep monitoring wells MMW-13D and MMW-14D exhibited significant cis-1,2-DCE and exceedances above the RDCL and vinyl exceedances above IDCL during this quarter (see **Figure 3**). Since these wells have been purposefully located upgradient of *Source Areas B* and *C*, the impacts observed in these areas demonstrate groundwater impacts that are attributable to other upgradient, off-site sources and not to Michigan Plaza. As seen on **Figure 3** the indicator compound concentrations at these deep, upgradient wells can be considered as “background levels” defined as the concentration of contaminants from the Genuine source coming into the deeper aquifer in this area. These indicator compound levels aid in discerning between the Michigan Plaza source impacts and the Genuine Site impacts, and will ultimately be used to evaluate the target cleanup levels for the deeper aquifer at the Site.

The indicator compound trends demonstrated at the northern wells (MMW-3S, MMW-4D, MMW-5D, MMW-6D and MMW-7S) at Michigan Apartments are attached in **Appendix C**. The cis-1,2-DCE and vinyl chloride concentrations coming onsite from the upgradient sources are still well above the RISC IDCLs in most of the northern wells (at the northern fence line) indicating that the remediation at the upgradient property will require multiple additional years to achieve acceptable cleanup levels.

IN-SITU BIOREMEDIATION PROGRESS

Based upon the 1) extent and severity of the indicator compound concentrations and trends, 2) site-specific operational constraints and uses, 3) geochemical and physical characteristics of the aquifer, and 4) economic factors, in-situ bioremediation with CAP18TM (an enhanced, food-grade vegetable oil product), followed by Monitored Natural Attenuation (MNA) is the selected remediation technology for the Site for treating groundwater, as detailed in the *RWP*. The initial CAP18TM injection was performed in all the three source areas in August 2007 using a direct push Geoprobe system. Locations and spacing of the injection points were designed to address the sewer line related *Chemical Source Areas* and provide injection locations in each *Chemical Source Area* that upon migration downgradient in the direction of groundwater flow, are expected to remediate the most significant groundwater impacts. A booster CAP18TM injection was performed in February 2009 to aggressively treat some areas where the chemical concentrations have begun to stabilize or are decreasing at a slow rate. During this quarter, no additional CAP 18TM injections have been performed.

Indicator Chemical Trends

A group of monitoring wells from the sampling network is utilized to monitor dissolved indicator compound concentration trends over time at various locations within the heart of the three *Chemical Source Areas*. Graphs of historical PCE, TCE, cis-1,2-DCE and vinyl chloride concentrations are developed for the following monitoring wells:

Source Area A: MMW-P-03D

Source Area B: MMW-P-01, MMW-P-07, MMW-P-08 and MMW-8S

Source Area C: MMW-1S, MMW-9S and MMW-10S

Figures 4 and 5 illustrate the changes in the chlorinated solvents concentrations demonstrating reductive dechlorination as a result of the CAP 18TM remediation implementation. To illustrate the effect of the CAP 18TM injection on dissolved chlorinated concentrations, injection dates are included on the graphs.

PCE and cis-1,2-DCE impacts in **Source Area A** (MMW-P-03D) appear to have a decreasing trend, and vinyl chloride demonstrated an increasing trend after the second round of CAP 18TM injection in February 2009. This is indicative of continued reductive dechlorination in this area (indicating further breakdown of parent compounds) in *Source Area A*.

PCE and cis-1,2-DCE impacts in the **Source Area B** have decreased, with corresponding increases in the vinyl chloride (MMW-P-01 and MMW-P-07) concentrations this quarter. This is indicative of reductive dechlorination in *Source Area B*.

There was a slight increase in the PCE concentration in monitoring well MMW-8S immediately after injection during the fourth quarter of 2007, accompanied by a spike in cis-1,2-DCE and vinyl chloride concentrations. A decreasing trend in PCE concentrations at MMW-8S began during the first quarter of 2008 and continued through the fourth quarter 2009. A slight increase in PCE was observed during this quarter. MMW-P-08 showed increases in both cis-1,2-DCE and vinyl chloride concentrations during this quarter while PCE concentrations remained below laboratory detection limits. Cis-1,2-DCE and vinyl chloride concentrations spiked after the first CAP 18TM injection downgradient of *Source Area B*, followed by decreasing cis-1,2-DCE trends and stable vinyl chloride trends. These trends remained consistent up until the 2nd injection event in February 2009. Since then, cis-1,2-DCE and vinyl chloride concentrations have been steadily decreasing. The analytical results are attached in **Appendix A**.

PCE impacts in the **Source Area C** (MMW-1S, MMW-9S and MMW-10S) appear to have a decreasing trend this quarter, and vinyl chloride demonstrated an increasing trend for this quarter. Cis-1,2-DCE concentrations were slightly decreasing this quarter in MMW-1S, MMW-9S and MMW-10S. This is indicative of continued reductive dechlorination in *Source Area C*.

Thus, an overall decreasing trend in PCE and TCE concentrations (in some areas achieving nondetectable concentrations), and an increase in the daughter product concentrations (indicating

breakdown of parent compounds via reductive dechlorination) have occurred significantly since the CAP 18TM injections in the *Source Areas A, B and C* in August 2007 and February 2009.

Indoor Air Sampling Results - 2010

Reduced indoor air concentrations (observed in the following spaces: Apt Buildings No. 1 (Apt 101) and 10 (Apt 1001), the Village Pantry space, Plaza 3805 (the former library space), Plaza 3811 (the former handicap space), the AA Suite, the Mexican Store and the Laundromat) were below the IDEM 2006 and IDEM 2010 target levels and are illustrated in the attached **Figure 2**. Also, reduced concentrations were noted in the soil gas monitoring well MGW-1 indicating COCs are being remediated in the area. **Table 3d** presents the U.S. EPA and IDEM screening/target levels.

The indoor air results at the Village Pantry, Mexican store and the Laundromat are all below both IDEM and U.S. EPA action levels (with the vapor mitigation systems running). This is consistent with testing over the past several years in the Plaza spaces where mitigation systems have been installed. The indoor air results for Plaza 3815 remain slightly above the IDEM 2006 action levels. Significant reductions in PCE and TCE concentrations have occurred in this space over the past six (6) years since installation and operation of the vapor mitigation system was initiated in 2003.

Indoor air concentrations have dramatically reduced in the 3817 Michigan Street location (currently Alcoholics Anonymous) and the 3805 Michigan Street space (former Library space). In addition, Plaza 3811 (the former Handicap space) showed minimal PCE and vinyl chloride concentrations and were void of TCE and cis-1,2-DCE impacts. Please note that these spaces DO NOT have vapor mitigation systems in place. These concentration reductions continue to demonstrate that site remedial activities continue to be successful in significantly reducing the indoor air impacts (see attached **Figure 2**). The PCE concentrations in each of these spaces are below the U.S. EPA and IDEM 2006 and 2010 action levels.

One of the Michigan Meadows Apartment building basement apartments (Apt No. 602) had an indoor air PCE concentration exceeding the IDEM 2006 and 2010 action levels. It should be noted that all the indoor air concentrations have been compared to the most conservative (25 or 30 year exposure) IDEM action levels (2006 and 2010 versions). The basement apartment is presently unoccupied with no exposure potential.

The soil gas monitoring well (MGW-5) showed a spike in the contaminant concentrations during the March 2010 sampling round which could be attributed to subsurface changes resulting from increased reductive dechlorination resulting from the 2nd CAP-18 injection event in February 2009. MGW-5, located in the middle of the plaza parking lot, will be sampled in June 2010. This soil gas well shows impacts exceeding some of the U.S. EPA (for TCE, cis-1,2-DCE and vinyl chloride) and IDEM 2006 (PCE, TCE and vinyl chloride) soil gas screening levels.

Considering the worst case scenario (an exposure duration of 25 years) yields a conservative comparison to actual risks to human health, as this location has been a parking lot since the initial development of the land. Furthermore, the nearest inhabited indoor spaces are all currently being addressed with air mitigation systems. Therefore, exposure pathways are significantly being reduced. MUNDELL will sample this gas well (MGW-5) again in June 2010 along with the next quarterly groundwater sampling round, to monitor soil gas trends in this area, particularly since it is located in the heart of *Source Area B*. MUNDELL anticipates these levels have been introduced from the previously existing groundwater plume in *Source Area B* which is currently undergoing dechlorination via the CAP 18TM remediation.

INDOOR AIR MITIGATION SYSTEMS PERFORMANCE

Four sub-floor slab depressurization units were installed by *Air Quality Control (AQC)* under the oversight of MUNDELL in September 2006. Three additional sub-floor slab depressurization units were installed by AQC under the oversight of MUNDELL on March 19 and 26, 2008. Unit/blowers were installed in the following spaces at Michigan Plaza: 1) the Village Pantry (B1), 2) the former Handicap Space (B2), 3) the Mexican Store (B3), and 4) the Laundromat (B4). The systems installed at the Michigan Apartments are: Building No. 1, Basement Apartment 101 (B5), Building No. 6, Basement Apartment 602 (B6), and Building No. 10, Basement Apartment 1001 (B7). The system locations are illustrated in **Figure 6**.

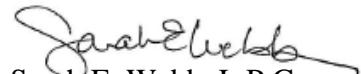

Since the time of installation, system stack air samples were collected weekly for a few weeks followed by bi-weekly sampling for a month, monthly for a quarter and then on a quarterly basis thereafter. PID readings have also been concurrently measured in each of the stacks. The historical PCE concentration trends and cumulative pounds of PCE and total contaminants removed by each of the systems (B1 through B7) are summarized in **Figures 7 through 15**.

As of the end of the first quarter of 2010, approximately *12.46 pounds* of PCE and *14.89 pounds* of total chlorinated solvents have been removed at the *Michigan Apartments property* (sub-slab depressurization systems **B5**, **B6** and **B7**); and approximately *85.35 pounds* of PCE and *91.20 pounds* of total chlorinated solvents have been removed at the *Michigan Plaza property* (sub-slab depressurization systems **B1**, **B2**, **B3** and **B4**). The associated calculations are provided in **Appendix B**. A concentration of half the PQL (practical quantitation limit) is assumed for the indicator compounds demonstrating concentrations below the laboratory PQL with the exception of vinyl chloride where an average concentration of 0.15 PPMV (derived from the J flag values for VC concentrations below PQL) is used for calculation purposes.

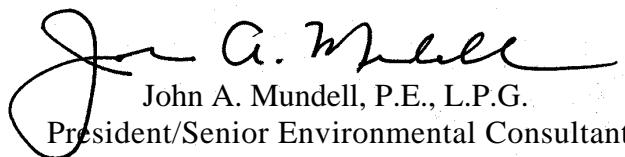

We appreciate the opportunity to update IDEM on the progress of remedial activities and monitoring at the Site. If you have any questions, please do not hesitate to contact us at (317) 630-9060 or via email (jmundell@MundellAssociates.com; swebb@MundellAssociates.com).

Sincerely,

MUNDELL & ASSOCIATES, INC.

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = trans-1,2-Dichloroethene

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high concentration of one parameter requiring dilution on other parameter quantitations

"-" indicates geochemical parameter was not collected, "NV" indicates data was not valid due to equipment error

All Values Over IDEML RISC Default Industrial Cleanup Level in **RED**

All Values Over IDEML RISC Default Residential Cleanup Level in **BLUE**

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = trans-1,2-Dichloroethene

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high concentration of one parameter requiring dilution on other parameter quantitations

"-" indicates geochemical parameter was not collected, "NV" indicates data was not valid due to equipment error

Indianapolis, IN 46219

RE: Project: Michigan Plaza
Pace Project No.: 5034444

Dear Ms. Lothe:

Enclosed are the analytical results for sample(s) received by the laboratory on February 04, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

QUALIFIERS

Project: Michigan Plaza
Pace Project No.: 5034444

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

- 1d Benzene evaluated to 5ug/L estimated RL. aa 2/10/10
- 2d PCE evaluated to 5ug/L estimated RL. aa 2/10/10
- 3d TCE evaluated to 5ug/L estimated RL. aa 2/10/10
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Michigan Plaza
Pace Project No.: 5034474

Dear Ms. Lothe:

Enclosed are the analytical results for sample(s) received by the laboratory on February 05, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

QUALIFIERS

Project: Michigan Plaza
Pace Project No.: 5034474

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

- 1d Benzene evaluated to 5ug/L estimated RL. aa 2/11/10
- 2d PCE evaluated to 5ug/L estimated RL. aa 2/11/10
- 3d TCE evaluated to 5ug/L estimated RL. aa 2/11/10
- D4 Sample was diluted due to the presence of high levels of target analytes.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Michigan Plaza
Pace Project No.: 5034667

Dear Ms. Lothe:

Enclosed are the analytical results for sample(s) received by the laboratory on February 15, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

REPORT OF LABORATORY ANALYSIS

Page 7 of 8

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: Michigan Plaza
Pace Project No.: 5034667

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

U - Indicates the compound was analyzed for, but not detected.

ANALYTE QUALIFIERS

1d RPD value was outside control limits for several compounds. Refer to batch QC for control. RSR 02/17/10

NS = Not sampled

Italic = Reported values are below laboratory detection limits.

Concentrations of PCE, TCE, and cis-1,2-Dichloroethylene assumed at 1/2 reported detection limit. Concentrations of vinyl chloride assumed at 0.15ppmv, the mean detected concentration below reporting limits.
